# WINDOWS & DOORS

Windows and doors hold profound significance for us humans, evoking a myriad of emotions that enrich our lives. They are not mere physical openings but gateways to our inner world and the outside universe. Windows invite feelings of wonder and connection, offering a sense of freedom and inspiration. Doors symbolize transition and anticipation, embodying warmth, safety, and belonging. Together, they infuse our spaces with a unique ambiance and character. At Mere, we understand and cherish these sentiments, creating UPVC Doors and Windows that not only beautify spaces but also nurture the feelings that make a house a true home.

# TYPES OF WINDOWS

## Villa Windows

A rare combination of style and substance, the Villa Window when launched was the first to introduce a twin sash, bug mesh and a grill built in the system. This ensures enhanced security and ventilation while not allowing insects and mosquitoes inside.

## Tilt And Turn

Welcome more sunlight and ventilation inside your home with these Tilt & Turn windows. Featuring a sash that can tilt open at an angle from the top with hinges at the bottom or can swing inwards with hinges on the side. Advanced engineering facilitates both these operations with the simple turn of a single handle.

## The Slider Window and Door

Featuring a sash that is hinged from the side on an outer frame that can open inwards and outwards. This ensures maximum ventilation in the room. Due to its double/triple glazing options, they enable better thermal and sound insulation as well. The windows come with multiple point locking systems and friction stay that ensures the window remains open in a fixed position even in the face of a stiff breeze.

## The Casement Window

Featuring a sash that is hinged from the side on an outer frame that can open inwards and outwards. This ensures maximum ventilation in the room. Due to its double/triple glazing options, they enable better thermal and sound insulation as well. The windows come with multiple point locking systems and friction stay that ensures the window remains open in a fixed position even in the face of a stiff breeze.

# TYPES OF DOORS

## The Casement Doors

These have hinged sash that swings in or out at an angle of up to 90°, allowing for maximum ventilation and visibility.

## Sliding Doors

Ideal for spaces with a large cavity, where you wouldn't want to or can't have a swinging door. It gives a wide expanse view. These can be made with two tracks, two and half tracks, three tracks or add on track profiles to accommodate multiple door panel movements and mesh panels.

## Slide & Fold Doors

This style of door arrangement is designed to give you the flexibility of partial opening or complete uninterrupted spatial view. It also works as a partition. Multiple sashes are joined in a unique slide and fold mechanism. These can be folded in either direction (left or right) and can be stacked at either end. When closed it is extremely secure with multi point locking system.

## Lift & Slide Door

These are extra-large panels with glazing to match, which makes them heavy. Recommended for very large window and door cavities for that uninterrupted view and feeling of awesome wide space.

Special hardware is used which glides panels back and forth on soft touch rollers, with very little effort.

- The inside as well as the outside walls around the window cavity should be finished in every respect, along with the sill.
- There should be no obstructions on the windows.
- The dimensions should be measured at 3 points (extreme ends and the middle) along the inside width and height of the window cavity. Difference, if any, should not be more than 8mm.
- The width of the windows should be more than the width of the window frame being ordered.
- Clear instructions should be given regarding the flushing of the window frame – whether it is to be aligned to the outside wall or to the inside wall. If it is to be installed somewhere in the middle of an extra wide sill, then exact specifications should be given about the space to be left on the outside or inside.
- No POP work should be done on the edge of the window sill or on the wall face along the window cavity, as it is likely to be damaged during installation. Before installation at least one coat of paint should have been applied to the area.
- In case grills are being installed they should be fixed in advance, on the outside, for sliders and inward opening windows. For outwards opening windows they will be fixed post the installation of the window.

# WHO ARE WE

Mère, a renowned player in the glass industry for the past 50 years, is now expanding its operations to include a new line of uPVC (unplasticized polyvinyl chloride) products. With an extensive experience and expertise in the glass sector, Mère has built a strong reputation for delivering high-quality glass solutions to its customers.

The decision to enter the uPVC market comes as a strategic move to diversify the company's product offerings and cater to the evolving needs of its clients. uPVC is a versatile and durable material widely used in the construction industry for windows, doors, and other applications. By venturing into this new line, Mère aims to leverage its existing expertise to provide comprehensive solutions to its customers.

The company's transition into the uPVC market is backed by a thorough market analysis and research, ensuring that it aligns with the evolving demands and industry trends. By combining its years of experience in the glass industry with the new uPVC line, Mère is confident in its ability to provide innovative and high-performance solutions to its customers.

Mère's commitment to quality, reliability, and customer satisfaction remains steadfast as it embarks on this new venture. The company will leverage its existing infrastructure, skilled workforce, and strong relationships with suppliers and partners to ensure a seamless transition into the uPVC market.

With its established reputation, extensive experience, and commitment to excellence, Mère is well positioned to make a successful entry into the uPVC market. This strategic move will not only expand the company's reach but also allow it to offer a broader range of products to meet the diverse needs of its customers.
